CLIENT ⊘ Reactive Network Solutions
PROJECT ⊘ Director of Development/Maintenance
DATE ⊘ February. '02

OBJECTIVES ⊘ Reactive Networks, a San Francisco based technology company, was looking for a "Save". The former web company could not deliver a site design that Reactive felt comfortable with. After 3 months, frustrated, Reactive dropped the web company. Their new problem was they needed a complete company web site in 10 days for a major trade show.

SOLUTION ⊘ The solution was to design a web site the reflected the corporate image they were demanding. With only 10 days to design, program, test and launch time was a major factor. Our solution was to design using many inherent features of HTML. This would make the site fast loading and reduce programming time by not having to deal with a large graphical interface. By day 7 we launched the site. The client was extremely excited with the new design and very impressed to see an entire web site designed, developed and launched in 10 days.
